

Homework 0

Name: TAYLOR

This first homework is used both to practice working with your peers and to become familiar with Gradescope. Answer clearly and completely; show your work so I can understand your thought process for partial credit; you are welcomed and encouraged to work in groups as long as your work is your own.

Question

After the war, as residents of Hogsmeade entered the food service industry, some witches and wizards remained in magical occupations. Food service in Hogsmeade was split between brewing butterbeer, where one worker could produce 10 pints per day, and baking cornish pasties, where kitchens became congested with too many bakers. One such witch developed a method for brewing butterbeer much more quickly. This enabled anyone familiar with the process to brew twice as much as they were previously able to. Use a four quadrant PPF to explain what happened to the food service after the new brewing method was widely adopted.

KEY POINTS

1. Setup the four quadrants
2. Correct production functions
3. Labor curve
4. Map the three quadrants into the ppf.
5. Shift F_B out, and re-map ppf
